

CBM INSULATING TAPE FOR WRAPPING UNDERGROUND JOINTS

Insulating tape for a grounding connection clamps in the ground. The tape protects against stress corrosion, which occurs in the case of synergy of two factors: a corrosive environment, i.e. the ground, and a constant stress force on the clamp plates, caused by twisted screws. Elimination of the corrosive environment prevents the occurrence of stress corrosion.

Cat no.	Width mm	Length m
C1030355	30	10
C1030356	50	10
